

TITANIC EDA REPORT - PAGE 1

DATASET OVERVIEW

Dataset: Titanic

Rows: 784

Columns: 16

Target Variable: survived

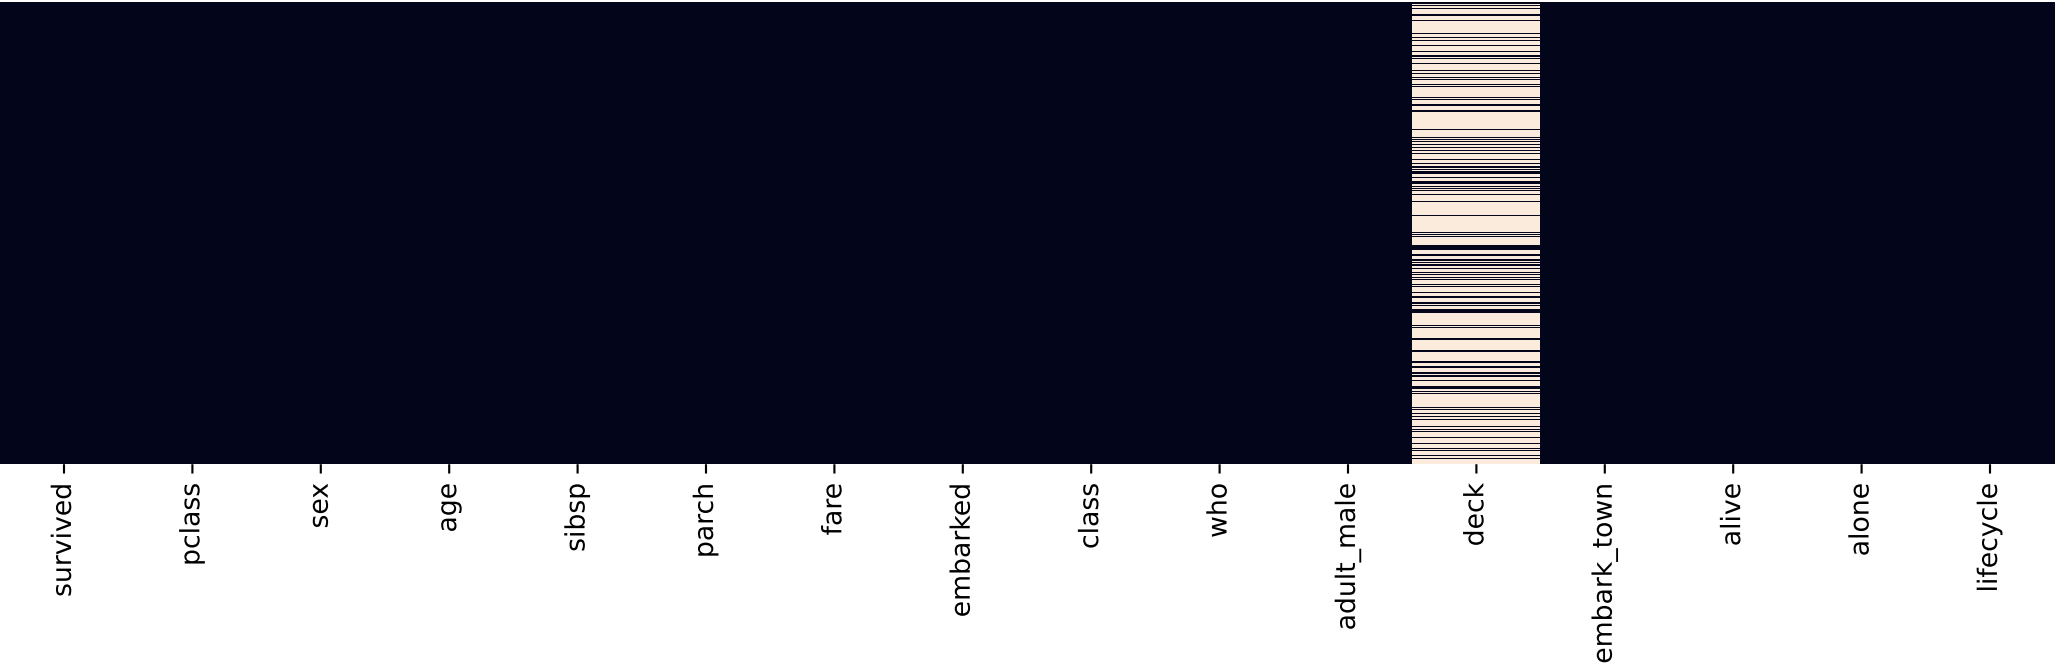

0 = Did not survive

1 = Survived

EDA Analysis:

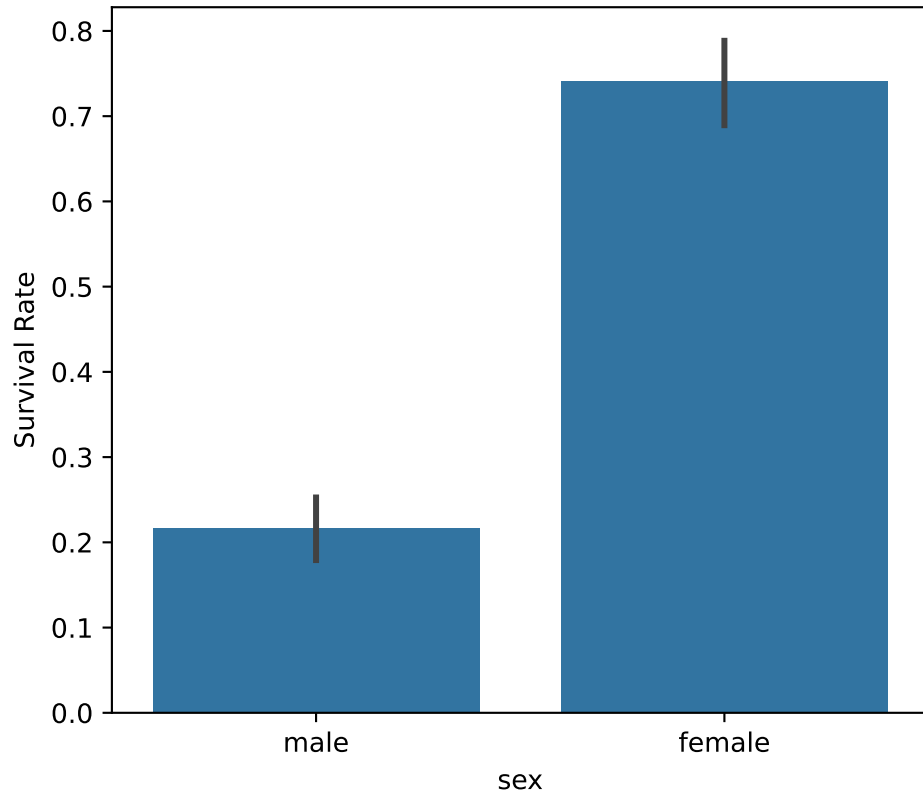

- Missing values
- Survival by sex
- Survival by class
- Survival by age
- Lifecycle mapping
- Correlation analysis

Missing-Value Heatmap

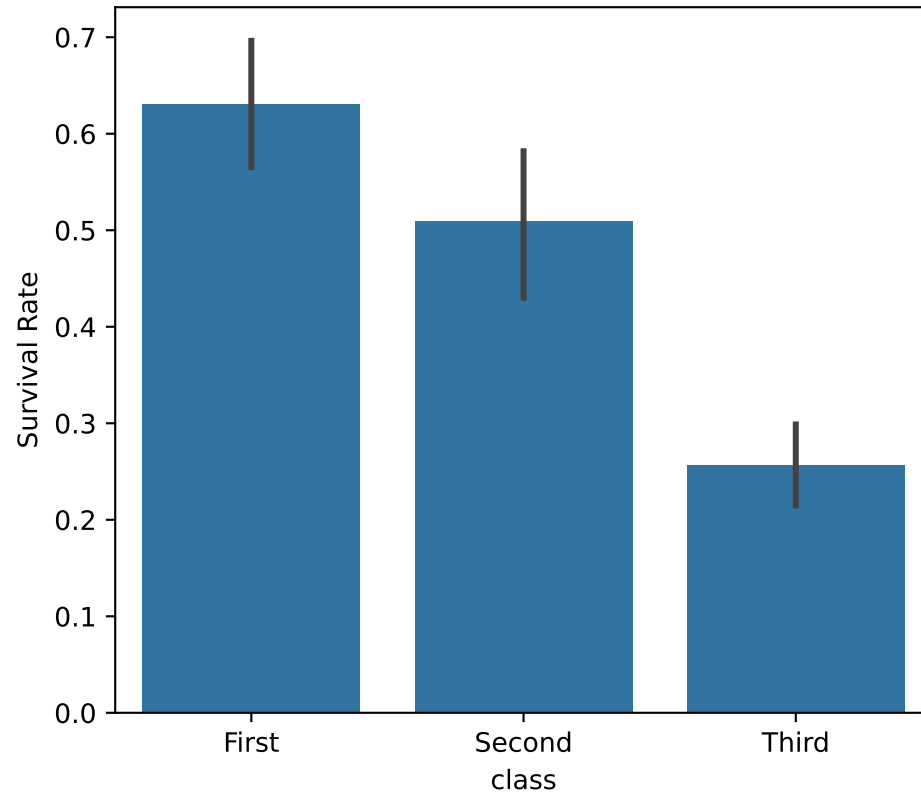

TITANIC EDA REPORT - PAGE 2: SURVIVAL ANALYSIS

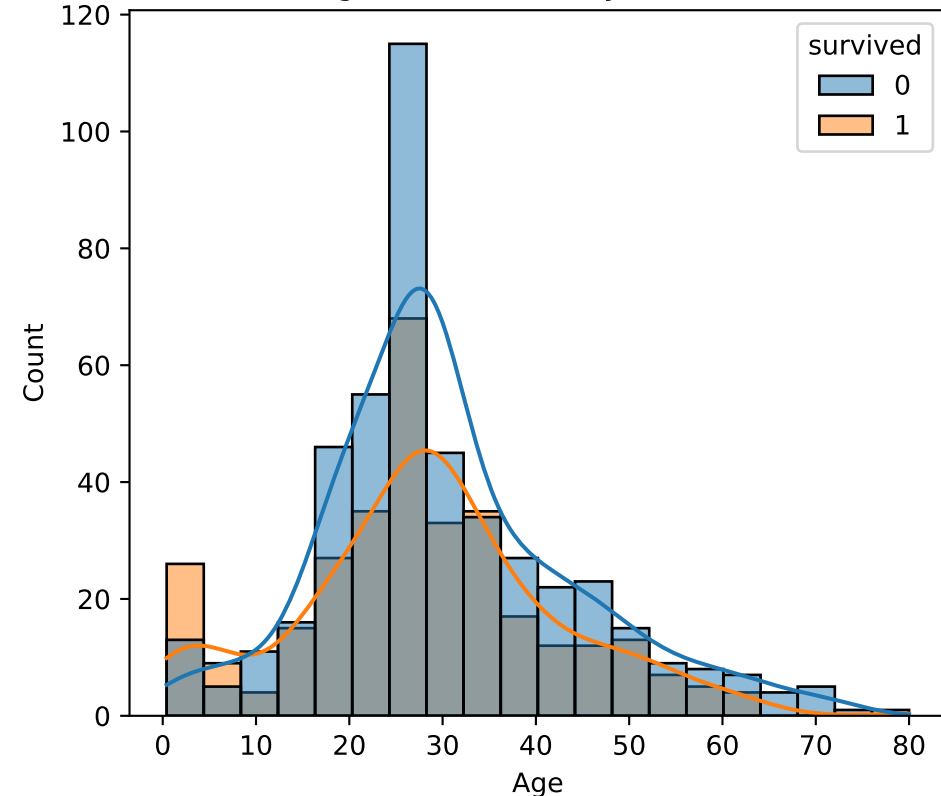

Survival Rate by Sex

Survival Rate by Class

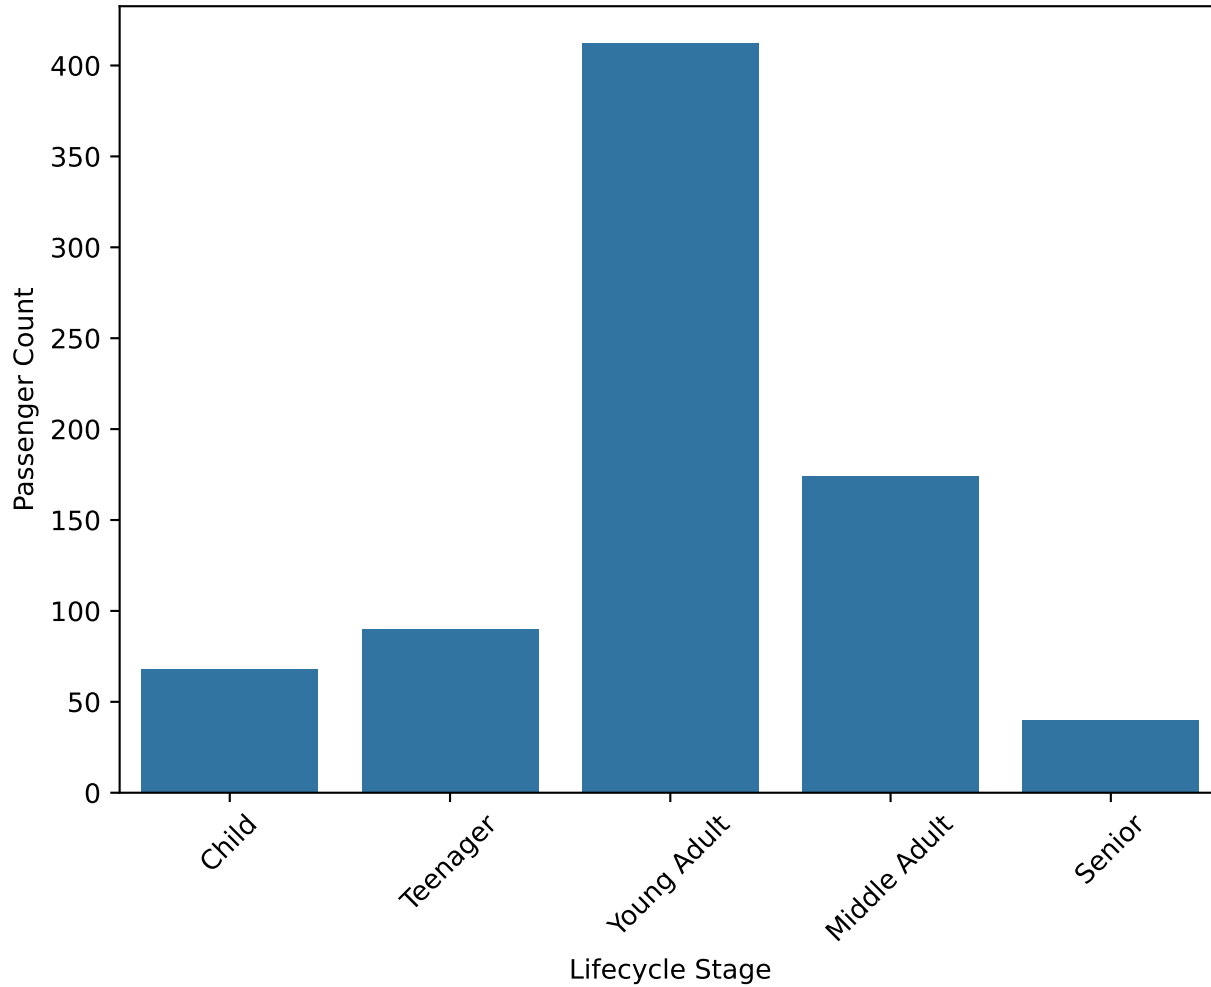

Age Distribution by Survival

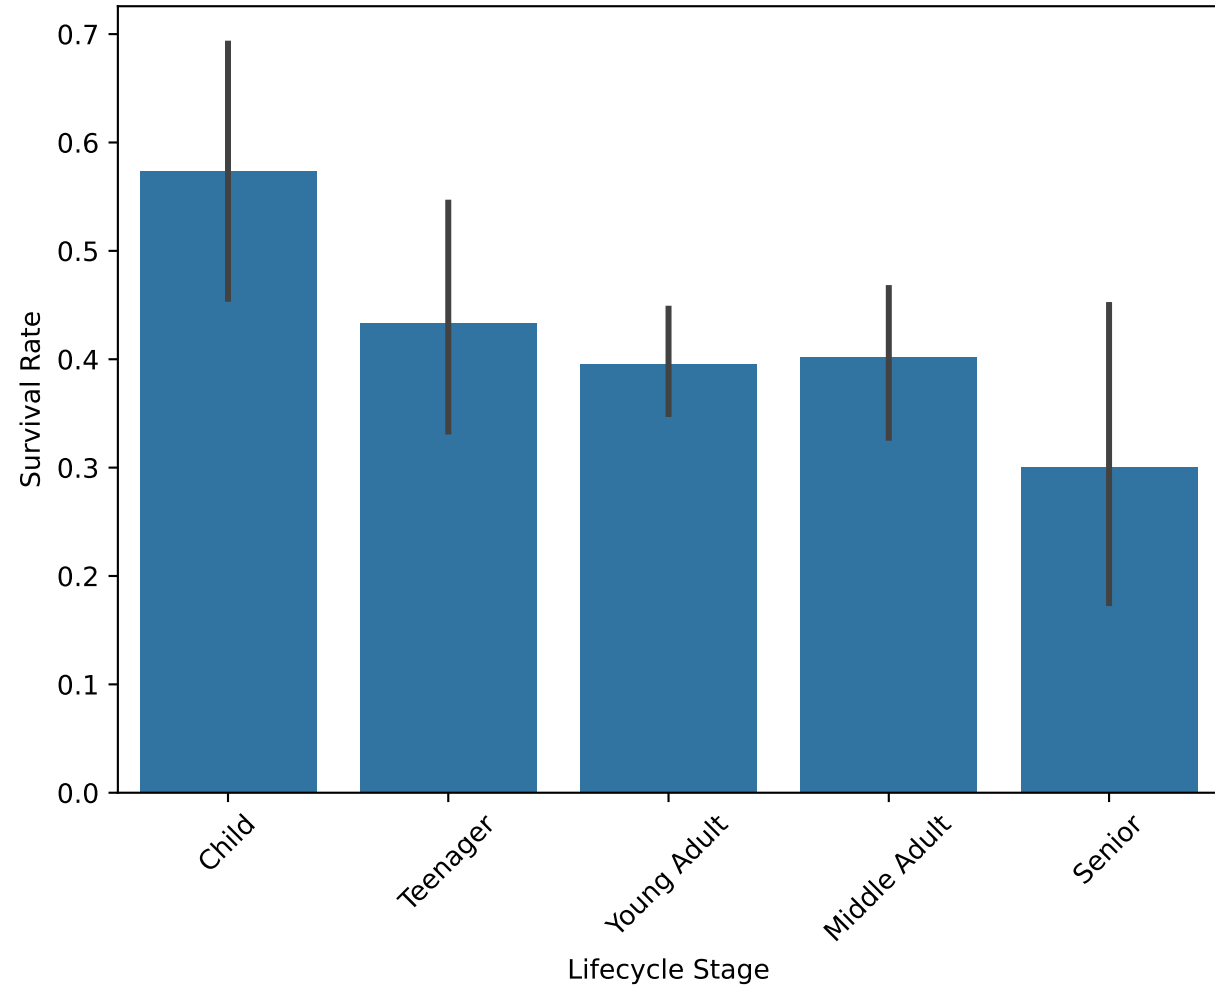

TITANIC EDA REPORT - PAGE 3: LIFECYCLE ANALYSIS

Passenger Count by Lifecycle

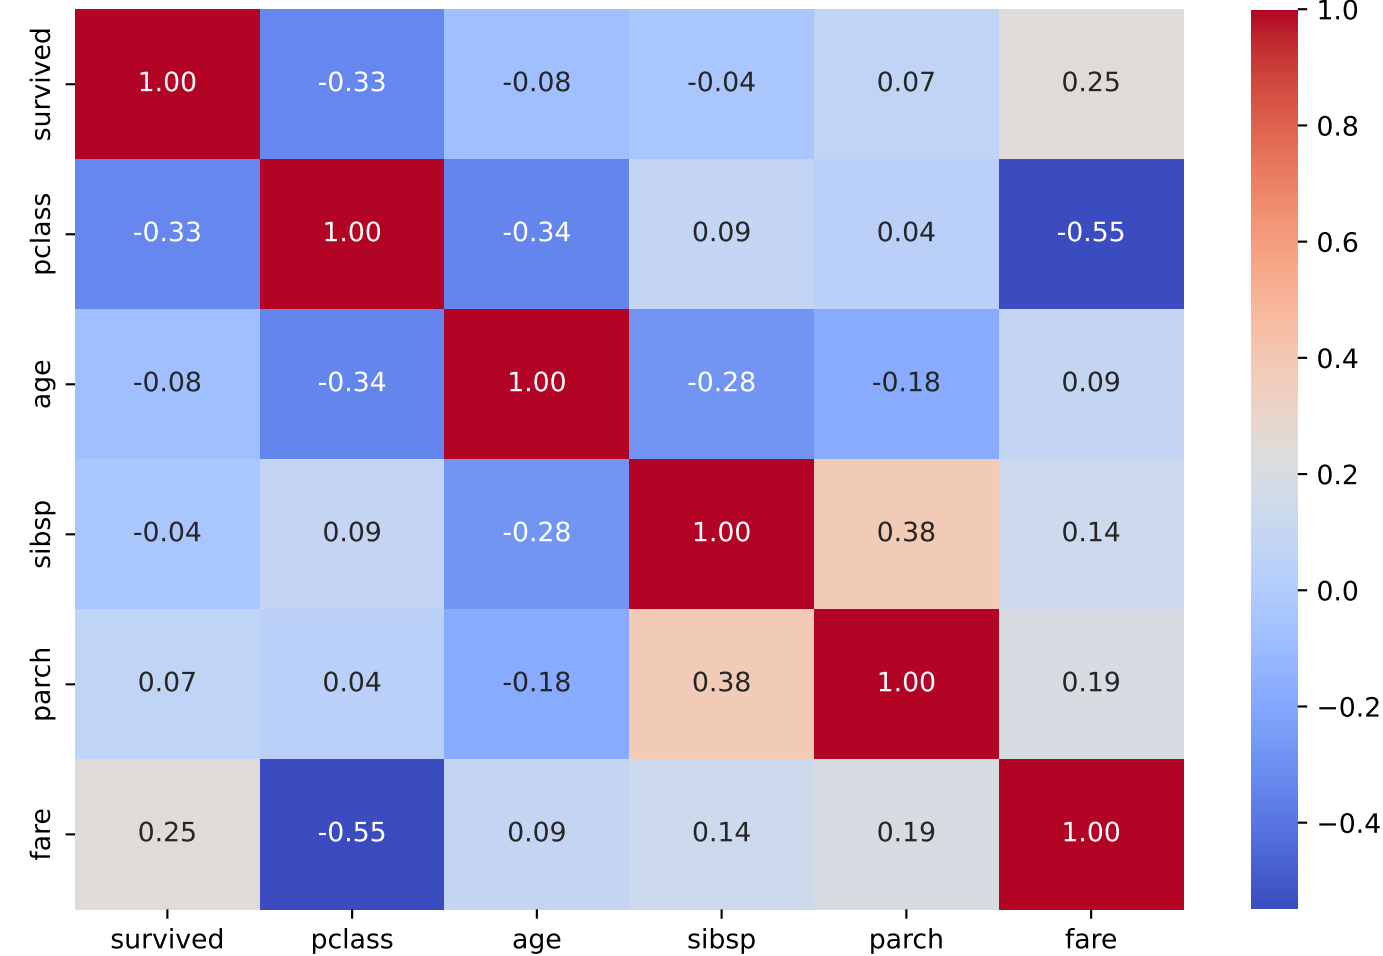

Survival Rate by Lifecycle

TITANIC EDA REPORT - PAGE 4

Correlation Heatmap

EDA CONCLUSIONS

- 1. Female passengers had a higher survival rate than male passengers.
- 2. First-class passengers generally had a higher survival rate.
- 3. Age showed a relationship with passenger survival.
- 4. Fare and passenger class showed relationships with survival.
- 5. Lifecycle mapping helps compare survival across age groups.
- 6. Missing values were identified and cleaned before analysis.
- 7. Correlation analysis helps identify relationships between numerical variables.
